

RIETVELD Acoustic light unit

Rietveld is a large-scale wall mounted acoustic light unit. The design is a configuration of 4 overlapping rectangular elements, 3 flocked Basotect sound-absorbing elements and 1 light element that casts a pleasant diffused light on the wall. By combining several units to each other, making use of the optional connection panel, it is possible to optimise the acoustics in spaces with long walls.

Application

- Wall

Properties

- Sound Absorbing
- Lightweight
- High aesthetic value

Mounting

Installation is very easy

Cleaning

Can be dusted daily with vacuum cleaner.

Technical specifications

Size

W 2605 mm ; H 965 mm ;
